TO	WANGWRITER US ERS	PUBLICATION #	5
FROM	OFFICE SYSTEMS SUPPORT	DATE	JUNE 14, 1982
SUBJECT	NEW SYSTEMS DISK 4.1 FOR THE WANGWRITER 5503A & 5503D		

Enclosed is the latest Systems Disk for the Wangwriter. Systems Disk 4.1 contains a few exciting new features and enhancements that have been implemented for your benefit, offering greater flexibility and increased efficiency! Please be sure to read each section carefully prior to loading the Systems Disk so that you may realize its benefits.

TYPEWRITER ENHANCEMENTS

Typewriter has been modified so that the printer head is positioned at the actual location where the next character will be printed.

The "Automode" feature has been added to typewriter. Keystroke sequences are the same as in the previous releases (eg. Merge Underscore, Merge Slash, etc.). Please note that Direct Typewriter will be slower in automode, because two characters must be printed for each character which is typed.

PREPARE ARCHIVE DISKETTE

This Utility has been slightly modified. The entire diskette is formatted, verified, then initialized as an archive diskette. The advantage being that if the diskette is damaged the system will notify you and the diskette will fail to initialize.

BOLD PRINTING

Bold print has been changed. In previous releases the printer hammer would strike a character once, move the carriage 1/120 of an inch and strike again. The new software will strike a character over three times without moving the carriage. This gives the bold print a more uniform appearance.

COMMON QUESTIONS & ANSWERS

- Question: When creating a new page, the prompt "Rearranging" remained in the right hand corner of the screen and the system froze. Touching cancel would not clear the screen. How can I exit from this document without losing text?
- Answer: When cancel doesn't clear the screen, the only alternative is to turn the machine off and remove the archive from the drive. Replace the archive with the systems disk and start the system up again. Return to the document to check for any damage and retry the operation. In case text is lost, run the diskette through Catalog Recovery.
- Question: Is there any way to chain more than one glossary document together to form a larger glossary beyond the one page limitation.
- Answer: Glossary documents cannot be chained together because the Wangwriter only verifies and attaches one page at a time. Within a chained glossary only the first page is verified and the rest remained unattached. Glossary entries may be chained together as long as they are on the same page.
- Question: Is there any way to change the defaults in the Print Summary Menu?
- Answer: There is no way to change defaults in the Print Summary Menu for new documents. However, once a document has been created and sent to the printer, any changes made in the print menu will remain until they are changed.
- Question: When a document is damaged in any way, ie: "CRC error", "Disk Format Error", what is the procedure to correct the error?
- Answer: First, duplicate the damaged diskette to a new diskette. If the error messages appear during the duplication, press EXECUTE to continue. Take the duplicated copy and run it through Standard Recovery. If this does not correct the problem contact the Wangwriter Support Center.
