

WANG

# Wangwriter

# The family of high-performance word processors at an affordable price.

*The movable display screen can be tilted up and down for maximum operator comfort.*

## **The many ways to use a Wangwriter.**

Wangwriter's powerful word processing makes it easy to type all your letters, memos and reports faster, with no errors. The Wangwriter can also perform a variety of personal computing applications using the CP/M® operating system. In addition, telecommunications options allow you to link your Wangwriter to other Wang computer systems, as well as to a variety of other business equipment.

Whether your needs require a single diskette system, or a dual diskette system to perform advanced word processing and business applications, the Wangwriter provides a growth path to meet your needs. Select disk space, memory size and software options to fit your applications. No matter what system you choose, Wangwriter offers a price/performance level that has never been available anywhere before.

## **Wangwriter versus typewriters.**

If you presently use typewriters, you run up against their limitations every time you type something or need to change what you've already typed. Drop a comma, hit a wrong key, revise a paragraph: your choice is to write it out. Tape it over. Send it out the way it is. Or retype it, from scratch.

But if you use a Wangwriter, typing and revision are easy. Everything you type shows up first on a television-like display screen. Type in text at your fastest rough-draft rate and forget about transpositions, omissions and all the other little mistakes that inevitably slow you down. Because with a Wangwriter, you can easily correct errors — a letter,

word, line or paragraph at a time. When you need to make revisions, you can move paragraphs and add text, while rearranging margins, paragraph or column indents and line spacing. All before you commit a single character to paper.

When you want to see the final, error-free result, Wangwriter prints it automatically. At over 200 words per minute. In your choice of 10, 12 and 15 pitch and a variety of type styles.

## **Wangwriter speeds typing by as much as 50%.**

Our users tell us that Wang word processors commonly increase overall typing productivity by as much as 50%. Because you're not wasting time manually correcting errors and re-keying text, you can be far more productive with a lot less effort. The net result — Wangwriter speeds the flow of critical information in your office.

Wangwriter's powerful text editing functions, combined with our trendsetting human-engineering, speed productivity even more. The Glossary function, for example, lets Wangwriter "remember" text you use often. Keep whole sentences, paragraphs and complicated typing formats ready for instant recall. Just two keystrokes does the retyping for you.

If you have to type certain words, sentences, address labels or paragraphs over and over, think how much faster your typing will be with a Wangwriter.

## **Wangwriter makes paperwork management easy.**

Ask anybody who's used a Wang word processing system. They're a snap to learn and use, because simple and direct screen instructions guide you through each operation step-by-step. Wangwriter also makes electronic filing easy. The system maintains a complete list of all documents stored on diskette. And it automatically displays or prints them by title in alphabetical order, showing the number of pages in each document. In fact, once you've seen how fast and easy

it is to file letter-perfect documents for future use with Wangwriter — you'll use it as your permanent electronic filing cabinet.

## **Easy to look at, too.**

Wangwriter is designed for operator comfort. It features a flexible arrangement with its lightweight, movable display and independent, movable keyboard. Ergonomics is the term that describes this. It means we've built Wangwriter to adapt to the way you want to work, rather than making you adapt to the way it works.

For instance, the lightweight display can be moved anywhere you want on your desk. You can move it to the side when you're working from notes. Or center it on your desk when you're entering rough drafts. You can also tilt the screen to fit the position you like best, eliminating overhead glare. Similarly, the independent keyboard can be moved wherever you want to fit your existing work environment.

## **Printing flexibility.**

With Wangwriter, there is no need to have a typewriter alongside your word processor.

When you want Wangwriter to act like a typewriter, it prints each character as you type it. You can position the printing element to exactly where you want it,

*Powerful, easy-to-use word processing, has made Wang the number one supplier of word processors to the world.*

allowing you to easily complete forms, as well as print memos and correspondence on many different sizes of paper.

And the "Hot Print" feature allows you to simultaneously edit and print the SAME document. For example, after typing the inside address, simply highlight the address with "Hot Print" and insert an envelope into the printer. The printer will then print that address onto the envelope while you complete the body of the letter. You only need to type the address once. And use the optional single-sheet feeder to automatically load paper into the printer, saving even more time.

### **High performance, low price.**

Wangwriter incorporates many of the functions and the same ease-of-use characteristics that have been so widely proven in tens of thousands of our Word

Processing installations. Wang is the number one supplier of word processors to the world and independent sources\* have rated the Wangwriter #1 in stand-alone word processing systems.

The Wangwriter consists of a video display screen that shows 24 lines of 80 characters each, a movable keyboard, and a separate printer unit with one or two diskette drives, control logic and fast-response memory built-in. For document storage, Wangwriter uses flexible 5¼-inch diskettes. Each one holds 75 pages of text. And because you can have as large a diskette library as you want, there's no limit to the number of pages you can store for fast updating and printing.

As an option on your Wangwriter with the dual diskette and larger memory, an

advanced editing package with math, sort, merge and pagination capabilities will be available.

### **Personal computing applications.**

Wangwriter also supports release 2.2 of the CP/M operating system. With CP/M you can use your Wangwriter to perform a variety of personal computing applications, such as financial planning, general ledger and small business accounting.

Operators simply load the CP/M operating system from minidiskette into memory. Then load the application of your choice from your minidiskette library. It's that simple.

### **Part of the Wang office automation family.**

Wangwriter is one of the newest entries in our ever-growing array of systems

*The independent keyboard features easy-to-understand editing keys.*

*The Wangwriter is designed to fit in your existing work environment. Both the keyboard and display screen are easily movable, and the printer is quiet and compact.*

solutions for increased office productivity. You can share information with our powerful Office Information Systems that offer combined word and data processing functions. Take information stored on Wangwriter diskettes and transfer it to OIS Systems through our new Mini-diskette Archiving Workstations.

You can include Wangwriters in a Wang 2200 distributed data processing network, and with Wang VS computer systems to perform local word processing and remote data processing. Wangwriter can serve as your "electronic mailbox" with the MAILWAY® Electronic Mail and Message System.

*Using the CP/M operating system, the Wangwriter can perform a variety of personal computing applications.*

### Part of the information processing community.

A host of telecommunications facilities link the Wangwriter to other systems with compatible communications capabilities. The Wangwriter supports:

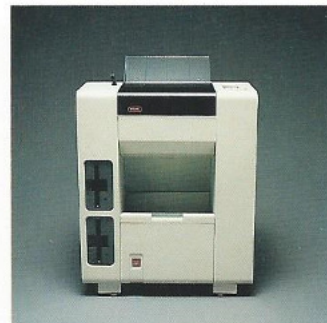

- ☐ Bisynchronous 2780/3780 emulation for remote job entry.
- ☐ Asynchronous TTY for access to timesharing services.

### What does it all mean to you?

Wang, a Fortune 500 company, is the world leader in office automation. And

we've put the wealth of our experience into Wangwriter. The results are dramatic advantages you can see right away, in price/performance and ease of use. Whether you are in the market for a single diskette system for high-performance typing; or a dual-diskette system with increased flexibility, Wangwriter provides a growth path to meet your needs. And with telecommunications and the CP/M operating system, you can be certain that for as long as you own your system, Wangwriter will continue to pay for itself in increased office productivity.

Talk to your local Wang sales representative about the Wangwriter family and discuss our quantity discount price structure that makes Wangwriter the most profitable equipment investment you can make.

*Print envelopes, forms, index cards and more. Save even more time with an optional single sheet feeder to automatically load paper.*
